Subject: Community input to NRRB

As you requested, I asked the Region 2 NRRB representative how the NRRB considers community input and what kind of community input the NRRB has found most useful in the past. He says that the NRRB wants to make sure that the community has the opportunity to participate in the cleanup process and sometimes considers whether the remedy proposed by the Region would have public support/acceptance (as one of the 9 criteria). He says that the community typically weighs in on the protectiveness of the alternatives from the point of view of people who live in the contaminated area (although there has been a broad range of community comments).

Please call me if you would like to discuss this further (212-637-4427).

As I said yesterday, I will be sending you a summary of the Remedial Investigation and Focused Feasibility Study reports next week.
